Abstract (en)

[origin: CN109023869A] The invention relates to an underframe (1) of a laundry drying apparatus for holding a heat pump. The underframe comprises a heat source and heat sink. The heat source and heat sink are respectively made into a heat exchanger (11) and is at least partially arranged in the receiving area (2,3) of the underframe (1). The receiving area is at least partially and sectionally covered by the heat source and a covering member (5) above the heat sink. The covering member (5) comprises at least one diffuser (7) used as a part of a system for cleaning the heat source and/or the heat sink. The underframe is characterized in that at least one diffuser (7) is floatingly supported in the gap (8) of the covering member (5).
