Abstract (en)

The invention provides a method for manufacturing a lighting device (1), the method comprising the steps of providing a housing (2) with a housing inner wall (21) and a main connector (3) and placing a conductive track (4) in the housing (2). The conductive track (4) has a connecting stretch (42) and is placed providing electrical connection between the main connector (3) and a secondary connector (5), the secondary connector (5) being suitable for providing power supply and/or information to a lighting module (6). Then, the connecting stretch (42) is directly fixed to the housing inner wall (21).
