Abstract (en)
[origin: WO2017142404A1] The invention relates to a block-like sound-absorbing paving element, comprising:- an upper surface; - a lower surface; - a number of side surfaces extending between the upper surface and lower surface; - a number of elongate recesses of different depths which are arranged for absorbing sound incident on the upper surface in different frequency ranges; wherein the recesses are provided in one or more of the side surfaces. The invention also relates to a surfacing comprising a number of paving elements which are placed or can be placed adjacently of each other on a ground surface, wherein the paving elements are embodied to allow one or more recesses in a side surface of a first paving element together with a remaining part of the side surface of a second, opposite paving element to form one or more resonators.
