Abstract (en)

[origin: WO2017142472A1] The present invention relates to an electronic door lock operating assembly (11), comprising a lock operating device (27) and a mounting plate (9) for attaching the lock operating device (27) to a door (1), said mounting plate (9) being configured to be secured to the door (1) and interact with a base plate (31) of the lock operating device (27). Each of the base plate (31) and the mounting plate (9) has an engagement portion (33, 15), wherein said engagement portions (33, 15) are configured to mechanically engage each other so as to rotationally lock said base plate (31) to the mounting plate (9). The engagement portions (33, 15) are configured for mounting of said base plate (31) in at least two different positions relative to said mounting plate (9). The electronic door lock operating assembly (11) further comprises a retaining element adapted to maintain the engagement portions (33, 15) engaged to each other.
