Abstract (en)
[origin: WO2017140487A1] The invention relates to a household refrigeration device (19), comprising a heat-insulated body (9) with an inner container (2), which delimits a coolable interior space (3) for storing foodstuffs and has a pocket-shaped recess (30) with a bottom (31). The household refrigeration device (1) comprises a refrigeration device for cooling the coolable interior space (3), a door leaf (4) which is provided to close the coolable interior space (3) in the closed state and to make said coolable interior space accessible in the open state, and an interior lighting system (10) for lighting the coolable interior space (3) when the door leaf (4) is open, which is fastened in the pocket-shaped recess (30). The bottom (31) of the pocket-shaped recess (30) comprises at least one fastening device (32), and the interior lighting system (10) has at least one mating fastening device (13) which is fastened on the at least one fastening device (32).
