Abstract (en)

[origin: WO2017141199A1] A device for supporting electronic tags, comprising at least one profiled element (2) that is longitudinally extended and can be fixed to a supporting structure and can be engaged by at least one electronic tag (3): the profiled element (2) forms at least two engagement regions (4a, 4b) that can be engaged selectively by the electronic tag (3), respectively at least one first engagement region (4a) adapted to allow the sliding of the electronic tag (3) along a movement direction that is substantially parallel to the longitudinal extension of the profiled element (2) and at least one second engagement region (4b) that is adapted to prevent the sliding of the electronic tag (3) along the movement direction.
