Abstract (en)

[origin: WO2018234183A1] The invention relates to a machine knitting tool (11) and in particular a machine knitting needle (12) comprising a shaft (15) which extends in the longitudinal direction (L). The machine knitting tool (11) has a stitch forming section (M) directly adjoining a front end (16) and a drive section (A) directly adjoining a rear end (17). A lower face (25) of the shaft (15) does not have depressions or recesses at least in the drive section (A) and extends along a plane (E). The shaft (15) forms at least one web section (30) with a web height (h1), which is maximally 1.1 mm, in the drive section (A). Furthermore, the shaft (15) forms at least one support elevation (31) in the drive section (A), said support elevation extending beyond the web height (h1) of the at least one web section (30) in the height direction (H) and instead having an elevation height (h3) with a maximum height.
