Abstract (en)  
[origin: WO2017147405A1] The various processes of a plant may be segmented into separate process blocks, which may be interconnected using fluid conduits and/or electrical connections. These process blocks may be directly connected, for example without an external piperack interconnecting process blocks. In some embodiments, each process block may be formed of one or more modules. The process-based nature of this modular approach, along with the optional lack of an external interconnecting piperack, may provide benefits over conventional modular plant design.
