Abstract (en)
[origin: CA3011626A1] The invention relates to a module for assembling tubular electric accumulators. The module comprises supporting elements consisting of an insulating material, having arrangements of openings for receiving and holding a group of accumulators in a parallel configuration. Films consisting of an electroconductive material extend on the surface of the supporting elements. The films are soldered to the respective terminals of the accumulators and form surfaces for electrical contact with the accumulators. Similar assembly modules are arranged in series with arrangements of complementary fixing elements between the adjacent supporting elements of the modules.
