Abstract (en)

[origin: WO2017144446A1] The invention relates in particular to a method for the acoustic playback of a digital audio medium, in particular an audio book, in a motor vehicle, in particular a two- or four-wheeled motor vehicle, at least one sensor, more particularly at least one velocity-, force- or acceleration sensor, used to detect driving parameters of the motor vehicle, being provided in or on the motor vehicle. Proposed are the following steps for the user-friendly playback of a digital audio medium in a motor vehicle: In a first step a first comparison is carried out as to whether the driving parameters detected by the at least one sensor characterise a section of road requiring a higher degree of alertness on the part of the driver of the motor vehicle. If the first comparison is positive, the playback of the audio medium is interrupted in a second step. In a third step a second comparison is carried out as to whether the driving parameters detected by the at least one sensor characterise a section of road requiring a higher degree of alertness on the part of the driver of the motor vehicle. If the second comparison is positive, the playback of the audio medium is still interrupted in a fourth step. Finally, if the second comparison is negative, the playback of the audio medium is resumed in a fifth step.
