Abstract (en)
[origin: WO2017144839A1] An inflatable paddleboard (2) comprising a body (4) having an upper surface (6) for receiving a person (8) and a lower surface (10) for engaging water, and the inflatable paddleboard (2) being such that: (i) the inflatable paddleboard (2) comprises stiffening means (12); (ii) the stiffening means (12) is located on the upper surface (6) of the body (4); (iii) the stiffening means (12) extends longitudinally of the body (4) and thereby stiffens the body (4) in a longitudinal direction; (iv) the inflatable paddleboard (2) includes adjuster means which is able to act on the stiffening means (12) to cause within the stiffening means (12) a compression force which resists upward bending of the body (4) by waves, and which is also able to alternatively act on the stiffening means (12) to cause within the stiffening means (12) a tension force which causes or enhances an upward curve in a front portion of the body (4).
