Abstract (en)  
[origin: WO2017144596A1] The invention relates to a tool for positioning at least one marking device (5) on a substrate in a given place. The marking device (5) has a perimeter, and the substrate includes a reference part (4) having a circumference. Said tool is characterized in that it includes: at least one so-called "alignment portion" (1) complementing at least one part of the circumference of said reference part (4), and at least one so-called "receiving portion" (2) forming a contour complementing at least one part of the perimeter of at least one marking device (5). The receiving portion is designed to be able to receive the at least one part of the perimeter of the at least one marking device (5) that adjustably makes contact with said receiving device.
