Abstract (en)

[origin: US2019000212A1] A cosmetic product applicator tip includes an attachment part suitable for being assembled with a support rod and an application part of the product extending along a main direction. The attachment part includes a support finger external to the support rod, the application part being attached to the support finger so as to encompass most of the support finger. The application part is configured to switch from an idle position wherein the support finger and the proximal end of the application part are free from any contact to a use position, wherein the support finger and/or the application part yield such that the proximal end of the application part is at the point of coming, or comes, into contact with the support finger and/or the support rod.
