Abstract (en)  
[origin: US2019000222A1] An applicator tip includes a sleeve and an application portion, extending along a main longitudinal extension direction, referred to as the main direction, between a first end referred to as the proximal end and a second end referred to as the distal end. The application portion includes first and a second application zones and a means of articulation intended to articulate the two application zones between them. The means of articulation separates the first and second application zones by forming at least one reservoir of cosmetic product between said first and second application zones.
