Abstract (en)
[origin: EP3420946A1] The present disclosure provides a surgical cartridge assembly including a proximal end, a distal end, and an elongate channel. The elongate channel includes a base and at least one opening within the base. The surgical cartridge assembly further includes a cartridge body configured to be removably received within the elongate channel and a slot configured to receive a cutting member. In addition, the surgical cartridge assembly includes at least one lockout tab extending from the proximal end of the cartridge body, wherein the at least one lockout tab is configured to cover the at least one opening when the cartridge body is received within the elongate channel, and wherein the at least one lockout tab disables a lockout mechanism to allow the cutting member to advance distally through the slot.
