Abstract (en)

[origin: WO2019002704A1] - The pivot connection part (1) is in one piece and comprises an inner body (2), an outer body (3) radially surrounding the inner body (2), a set of connection elements (4) producing a continuity of material between the inner and outer bodies (2, 3) in an initial relative position, the breaking of the connecting elements (4) detaching the inner and outer bodies (2, 3) from each other and thus allowing a relative rotation between them, a blocking assembly (5) comprising at least one cam (7) and a stop, capable of blocking the relative rotation between the inner and outer bodies (2, 3) in a first direction of rotation in an end relative blocking position, and a blocking assembly (9) comprising at least one pawl (11) and a resilient stop blade (12), capable of blocking the relative rotation between the inner and outer bodies (2, 3) in a second direction of rotation, opposite to said first direction of rotation, in the blocking position.
