Abstract (en)  
The present invention provides a method of manufacturing a receiver-in-canal assembly. The method comprises the steps of providing an elongated tube configured for transfer of a signal; bending the tube to provide a first bent section; arranging a first stiffening member at the tube to support the tube at the first bent section; and rotating the first stiffening member relative to the tube member to adjust the receiver-in-canal assembly for a right or a left ear of a user.
