Abstract (en)  
[origin: US2017251722A1] A flavor assembly for an e-vaping device cartridge encloses a porous structure that enables elution of flavorants from the structure to form a flavored vapor. The structure may include a three-dimensional network of material. The flavorant may be infused in the material. The material may include a botanical material. The material may draw the flavorant from a reservoir. The flavor assembly may direct a raw vapor formed by a vaporizer assembly to pass through the porous structure, so that the flavorant is eluted from the structure into the vapor to form the flavored vapor. The flavor assembly may be removably coupled with a vaporizer assembly. The flavor assembly may be removably received into a flavor assembly compartment. The flavor assembly compartment may be removably coupled to a vaporizer assembly. Flavor assemblies may be swapped from the e-vaping device to enable swapping of flavors provided to adult vapors during vaping.
