Abstract (en)

[origin: US2017253413A1] A food preparation package is disclosed. In some embodiments, the food preparation package can include a burst compartment, a first compartment to contain a first food ingredient, and a second compartment to contain a second food ingredient. The food preparation package can also include a first frangible seal separating the burst compartment and at least one of the first and second compartments. In addition, the food preparation device can include a second frangible seal separating the first and second compartments. Fluid pressure introduced into the burst compartment can break the first frangible seal and the second frangible seal to introduce the first food ingredient and the second food ingredient to one another within the package. In other embodiments, a food preparation package can include a first compartment to contain a first food ingredient, and a second compartment to contain a second food ingredient. The food preparation package can also include a frangible seal separating the first and second compartments. In addition, the food preparation package can include a filter to prevent unwanted material carried by a fluid from entering or exiting the package. Introduction of the fluid can provide a fluid pressure that breaks the frangible seal and introduces the first food ingredient and the second food ingredient to one another within the package.
