Abstract (en)
[origin: WO2017148554A1] The invention relates to a labeling apparatus (100) for processing labels (124) of any label shape off label webs (101), comprising at least one transport device (123) for transporting a label web along a specified transport path, at least one position detection device (107) for detecting the position of the label web (101) and/or for detecting the position of a label (124) of the label web, and at least one web run control device (109) configured for carrying out position changes of the label web (101), and can be characterized in that the at least one position detection device (107) is configured to determine the position of the label web (101) and/or the position of a label (124) of the label web (101) from at least one position detection of a least one feature of the label web (101) and/or from at least one feature of a label, and in that the labeling apparatus (100) has at least one alignment device (114) for aligning objects (125) to be labeled, in particular for aligning containers to be labeled, depending on the label shape.
