Abstract (en)

[origin: WO2017151546A1] A method for modifying a native runtime environment comprising modifying symbols in the least one of a compiled executable or byte-code of each of a plurality of library versions, modifying references to the symbols in development code associated with the at least one of the compiled executable or byte-code, building the development code into a plurality of versioned library packages, renaming identifiers in each of the versioned library packages and modify an application build for the native runtime environment to reference each of the versioned library packages according to their renamed identifiers.
