Abstract (en)

[origin: WO2017149062A1] The invention relates to an electronic component, having a cavity (4), in which a magnetic circuit is arranged, wherein the magnetic circuit is formed by first (5) and second (6) magnetic conducting elements, between which at least one planar coil (7; 15, 16) is located, wherein the magnetic conducting elements each have at least one bridge-shaped region (12, 13), and the windings of the planar coil pass between the bridge-shaped regions of the magnetic conducting elements, wherein the bridge-shaped regions each have a first end (8, 10), wherein a coil core for the planar coil is formed by the first ends lying opposite each other, and the bridge-shaped regions each have a second end (9', 9"; 11', 11"), wherein the magnetic circuit is closed at the periphery of the planar coil by the second ends lying opposite each other.
