Abstract (en)

Resistive element applied to heating equipment shaped from an absolutely innovative formal structure, notably developed for application in hair drying (SC) heating equipment and other similar equipment that require heat for use, significantly increasing the efficiency and saving of applied equipment, featuring, for such purpose, at least one flat and aligned profile resistive element (1) mounted in a wave-shaped format (2), where at least one support structure (3) with four radial vanes is mounted and houses, aside from the resistive element units (1), the respective connection terminals and a thermostat, as well as required electrical wires.
