Abstract (en)
[origin: WO2017153494A1] The invention relates to a component (1), in particular for forming a movable or immovable object, comprising: a component body (2), at least one device (3) for holding a bait (4) for pests, wherein the device (3) has a housing (5) which delimits at least one receptacle chamber (6) for receiving at least one bait (4), wherein the housing (5) comprises at least one platform (7), which delimits at least one passage opening, through which a pest can reach a bait (4) arranged in the housing (5), wherein at least one part of the device (3), in particular at least one part of the housing (5) and/or at least one part of the at least one platform (7) and/or at least one part of a receptacle device (23), which delimits a receptacle chamber (22) for receiving the device (3), is designed integrally with at least one section of the component body (2).
