Abstract (en)
[origin: WO2017152953A1] The invention relates to a hand-held suction device comprising a housing arrangement (22), a suction fan arrangement (26) which generates a suction flow and is arranged in a housing (24) of said housing arrangement (22), a suction material container (80) which has an interior (84) to which the suction flow of the suction fan arrangement (26) can be applied, a retainer (32) for a battery arrangement (30), a handle (36), and a suction connection piece (88) that is arranged on said suction material container (80), a rotary bearing (106) being provided by means of which the suction connection piece (88) can rotate relative to the interior (84) of the suction material container (80).
