Abstract (en)
[origin: WO2017157707A1] The invention describes and presents a vacuum-cleaner suction tube (1), and a method for producing a vacuum-cleaner suction tube (1), having at least one inner tube (2), having at least one outer tube (3), having at least one actuating mechanism (4), and having at least one end sleeve (5) introduced into the outer tube (3), wherein the end sleeve (5) is arranged between the inner tube (2) and the outer tube (3), wherein the end sleeve (5) has at least one end-sleeve aperture (6), wherein the outer tube (3) has at least one outer-tube aperture (7), and wherein the inner tube (2) has a plurality of latching depressions (8). A vacuum-cleaner suction tube (1) which provides for reliable and leakage-free connection to an attachment element, any kind of plastics materials being used for the attachment element, is realized in that the actuating mechanism (4) blocks an axial movement of the end sleeve (5) relative to the outer tube (3), and in that the inner tube (2) blocks an inwardly directed radial movement of the actuating mechanism (4) relative to the outer tube (3).
