Abstract (en)
[origin: WO2017152902A1] The invention relates to a manually movable transport device, in particular a golf caddy, comprising wheels (1), which are arranged coaxially at a distance from one another, and a structure (3-5) which is pivotable about the axis of rotation (16) of the wheels (1) and connected to said wheels. According to the invention, devices are provided for automatically adjusting a predetermined pivoting position of the structure. An adjustment to a position of equilibrium of the structure (3-5) is carried out according to the invention in particular when the position of the center of gravity of the structure (3-5) is located above the axis of rotation (16).
