Abstract (en)
[origin: WO2017153655A1] Attached device (2) for a threaded neck (4) of a container (3), comprising a first ring (8) provided with a thread which allows the first ring (8) to be screwed onto a threaded neck (4) of the container (3), and a second ring (9) that rotates as one with the first ring (8) with the aid of at least one coupling member (10) which is separate from at least one of said first and second rings (8, 9) and comprises at least one zone for coupling to the at least one first, second ring (8, 9) from which it is separate, the coupling member (10) comprising a breaking zone separate from said coupling zone and intended to break starting at a threshold rotational torque applied between said first and second rings (8, 9).
