Abstract (en)
[origin: WO2016146543A1] The invention relates to a reinforced concrete component (12', 12", 12''') comprising at least one connecting section (14, 14', 14'') for joining the reinforced concrete component (12', 12", 12''') to another reinforced concrete component (12', 12", 12''', 12''''') and is characterized in that the connecting section (14, 14', 14'') has a wood-like structure such that connecting elements (24, 24', 24'') used in wood-based technology can be placed in the connecting section (14', 14'') in order to connect the reinforced concrete components (12', 12", 12'''). The invention further relates to an assembly (10, 10') of disclosed reinforced concrete components (12', 12", 12''', 12''''').
