Abstract (en)
[origin: WO2017153558A1] At the bottom of a shell (5), a temporary storage can (4) for vacuumed waste comprises a dish (31) that is pushed upwards by a spring but lowers when flexible bags (13) located above the dish (31) fill up with waste. The position of the lid (13) is continuously monitored so that it is possible to stop the vacuuming operation only once the can is full enough but before getting clogged.
