Abstract (en)  
[origin: WO2017153017A1] A female element (10), in particular a plug socket (16), for an electrical plug connection (14), having at least two electrical contact elements (20) for transmitting electrical energy is equipped with a radio unit for transmitting radio signals for identification and/or compatibility checking in respect of allowing a permanently reliable and electrically safe connection independently of the type of power supply, wherein the radio unit interacts with a controller which is used to allow the transmission of electrical energy by means of the contact elements (20), and having a switching element for activating the radio unit, wherein the switching element can be operated by plug-connecting the female element (10) to a complementary male element (12). A male element (10), an electrical plug connection (14) and also a method for producing an electrical plug connection (14) are disclosed.
