Abstract (en)
[origin: EP3427803A1] [Technical Problem] In a shaft seal device mounted rotating electrical machine, the object aims at reducing the overall size of the machine, by promoting the efficiency in a treating part for degassing. [Solution to Problem] The shaft seal device mounted rotating electrical machine includes: a rotating electrical machine which includes a rotating shaft equipped with a shaft seal device having an inlet portion and an outlet portion of seal oil, a main oil tank in which the seal oil supplied to the shaft seal device of the rotating electrical machine is stored, a seal oil cleanup tank which includes an inlet portion connected to an outlet portion of the main oil tank, and has an oil level regulating valve, a degassing pump which includes an inlet portion connected to an outlet portion of the seal oil cleanup tank, a pressure regulating valve which is disposed between the outlet portion of the seal oil cleanup tank and an outlet portion of the degassing pump, a differential pressure control valve which is disposed between the outlet portion of the degassing pump and the inlet portion of the shaft seal device.
