Abstract (en)

[origin: EP3428514A1] Lighting device (1) for a vehicle including a cup-shaped housing body (2) and at least one cooled lighting module (5) arranged within the housing body facing a front inlet opening (3) thereof closed by a transparent cover or lens (4); wherein each cooled lighting module includes at least one light source (6), a radiator element (7) operatively associated to the at least one light source to remove the heat generated in use thereby and a diverter screen element (10) assembled directly onto the radiator element, rigid therewith and spaced apart therefrom, delimiting with the radiator element and within the housing body a non-linear channel (12) arranged at the rear of the light source and having a first open end (14) facing a fan (16) operatively associated with the radiator element (7) and a second open end (15) facing the transparent cover or lens (4).
