Abstract (en)
[origin: WO2017158492A1] A device for rolling smokers' articles such as cigarettes or filters, comprises a feeding unit (2) for feeding a continuous web (100) of wrapping material having a succession of discrete areas (110), a conveyor (3) defining a feed path (P) for the continuous web (100), cutting means (5), located along the feed path (P) and acting in conjunction with the conveyor (3) to cut the continuous web (100) both at zones (120) of the continuous web (100) with the discrete areas (110) and at zones (130) of the continuous web (100) without the discrete areas (110), and at least one turning device (9), active on the feed path (P) and operating on at least one of the patches (200') separated from the continuous web (100) to overturn the patch (200') in such a way as to invert the positions of the front edge and rear edge of the patch (200') with reference to the feed direction of the patch (200') along the feed path (P).
