Abstract (en)

[origin: WO2017160996A1] An article of footwear can include provisions for facilitating the installation of various components, A sole plate can include one or more specialized compartments designed to receive a component. The sole plate can be configured to provide greater stability to a sole structure. In some cases, the sole plate can be used to receive a component that can be used to perform different functions in a motorized tensioning system. Tabs within the sole plate can assist with retaining components within the sole plate and provide additional surface area for mounting the sole plate to other components of the article of footwear.
