Abstract (en)
[origin: WO2017157945A1] The invention relates to a chair (1) comprising a base frame (2), a seat element (3), a back element (4), a spring mechanism (5) and an adjusting element (6, 101), said spring mechanism (5) comprising a leaf spring (9, 10) tensioned on one side in the base frame (2) and a support (13, 14) which can move between the leaf spring (9, 10) and the base frame (2) on a track (15, 16) and the adjusting element (6, 101) comprises a control element (102) and transfer means (103). The transmission of a movement of the control element (102) into a movement of the support (13, 14) occurs at a transmission ratio of 1:0.5 - 1:4.
