Abstract (en)  
[origin: WO2017158259A1] The invention relates to an enclosure (1) having a sealing device (30), for a casting installation, having a first body (10) and a second body (20) that is removably joined to the first body along a bearing axis (G), the first and second bodies together delimiting an internal chamber (3). The sealing device comprises: -at least one compression member (31), -at least one seal (40A) having a lateral contact face (41A) extending substantially parallel to the bearing axis (G); -the compression member and the seal being arranged with respect to one another such that the compression member is in contact with the lateral contact face of the seal and exerts a compression force thereon that is oriented orthogonally to the bearing axis.
