Abstract (en)
[origin: WO2017157999A1] Transport container (1) comprising a jacket (2) which is made in particular of endless woven material and extends between a bottom part (3) and a top part (4) in such a way that a container volume is formed for holding granular, liquid, viscous or semiliquid materials, especially bitumen; a plurality of, preferably four, stabilizing elements extend along the jacket (2), from the region of the bottom part (3) to the region of the top part (4), the ends of said stabilizing elements being connected in a tension-resistant and pressure-proof manner at least in the region of the bottom part (3) by means of a bracing structure.
