Abstract (en)

[origin: WO2017158279A1] The invention relates to an air inlet system for ventilating a building, having an air inlet device (10) that has a fastening surface for fastening to a wall (2) comprising an opening leading towards the exterior, said system having a crosspiece (30) comprising a first face intended to be fastened to the wall (2), surrounding the exterior opening, and a second face, substantially on the opposite side, intended to receive the fastening surface of the air inlet device (10), this crosspiece having, from the opening towards the exterior, a direct air passage towards the interior of the building forming a constant flow, and an internal air passage towards said inlet device forming a main flow.
