Abstract (en)

[origin: WO2017158537A1] The invention relates to a temperature-control body assembly (1) that has at least one temperature-control body, through which an energy-transporting medium can flow and which comprises at least one supply line (5) and at least one discharge line (6) for the energy-transporting medium. The temperature-control assembly (1) has a first region (1a) through which a first energy-transporting medium can flow in order to come into thermal contact with the first medium and a second region (1b) through which a second energy-transporting medium can flow independently of the first energy-transporting medium in order to come into thermal contact with the second medium.
