Abstract (en)
[origin: WO2017157509A1] The present invention relates to a refrigerant circuit for a cooling and/or freezing appliance, comprising at least one body and at least one cooled inner chamber which is arranged in the body, said refrigerant circuit comprises at least one evaporator, at least one condenser and at least one compressor, the condenser is arranged partially or fully in a liquid bath which at least partially absorbs the condensation heat when the refrigerant circuit is in operation.
