Abstract (en)
[origin: WO2017158256A1] The semiautomatic firearm comprises: – means for recovering the energy resulting from the pressure exerted when firing a round (7) in order to move a mobile assembly (4) counter to a return spring (10) and comprising an obturator, a lock and a firing pin engaging with a hammer (5) controlled by a trigger (6), – locking means (11) behind the mobile assembly (4), in the compressed position of the return spring (10), after each shot, – a manually actuatable unlocking assembly (12) that is able to act on the locking means (11) in order to release the mobile assembly (4) and to permit the assisted return of said mobile assembly (4) for reloading.
