Abstract (en)
[origin: WO2017158241A1] The invention relates to an RF filter comprising a casing (C), a wall structure (W) between a bottom (B) and cover (T) of which defines inside of it at least one compartment (CPA1-CPA4). The RF filter has compartment-specific resonators (R1-R4), and the RF filter comprises a signal port (SP1) and an RF transmission line (TL) connected to it, the RF transmission line being arranged to transfer an RF signal to the compartments (CPA1-CPA4) of the RF filter. In order to support the RF transmission line, the wall structure (W) of the casing (C) comprises one or more supporting brackets (SU1-SU4, SU11-SU13) which are bent from a wall of the wall structure and to which the transmission line (TL) is fixed by means of an insulating mounting (IS).
