Abstract (en)

[origin: CN109339178A] The invention relates to a container (1) for holding cleaning agents and/or an odorant for an in-wall cistern with an inspection opening, which is associated with an opening defining a mounting frame, wherein the container (1) is insertable in a chamber of the in-wall cistern. In order to be able to assemble and disassemble such a container in the in-wall cistern, in particular a flat in-wall cistern with a small horizontal interior depth, in a simple manner, the invention provides that the container (1) has a resilient and / or flexible region (7) that connects a first portion (8) comprising the bottom (9) of the container (1) with a second portion (10) defining the opening (11) of the container (1); by using an external force acting on the container (1), a first state of the container can be converted into a second state, wherein the container (1) is compressed in the second state by means of the resilient and / or flexible region (7) such that at least one outer dimension of the container (1) is shortened when compared to the first state.
