Abstract (en)  
[origin: EP3431693A1] The present invention relates to a louvre system for facade cladding comprising at least two mullions for attachment to a facade and a plurality of louvre blades, wherein each louvre blade is supported from the at least two mullions by a respective bracket provided to a respective mullions. The louvre system further comprises a mesh structure positioned in-between, and (directly) connected to, the at least two mullions.
