Abstract (en)
[origin: US2019021456A1] The invention relates to a portable electronic device including a case and a watchband link attached to said case, the case comprising a pair of horns, between which is disposed a female electrical connector, the link comprising a male electrical connector disposed at the end of the link and adapted to make an electrical connection with the female electrical connector when the link is mounted on the case. According to the invention, each horn comprises a bar intended to come to be housed in an opposite housing of the watchband, the bars engaging successively in a guide groove and then in a locking groove formed in the link, the device comprising a manual actuation member for moving the bars into a retracted position.
