Abstract (en)  
[origin: WO2018028190A1] A modular sole structure, including a sole (12) and at least one convex (120) mounted on the sole (12). A removable anti-wear block (13) is mounted at the bottom of the convex (120) near the ground, which matches with the convex (120). The modular sole structure can form a modular sole structure by mounting a removable anti-wear block (13) in the sole (12). When the anti-wear block (13) is worn out, a new anti-wear block (13) can be replaced. In this way, the user can fine adjust his walking posture, and thus reduce the wearing-out of the sole structure. Because of this, the life-span of the shoes is prolonged, and the undesirable walking posture caused by the wearing-out of the sole (12) can be avoided; by replacing the removable anti-wear block (13), the user will not have to frequently replace new shoes and economic loss is avoided.
