Abstract (en)
[origin: WO2017162623A1] The invention relates to a tool bit comprising a tip (2), a working section (6) and an impact surface (3), and a longitudinal axis (7) extending through the tip (2), the working section (6) and the impact surface (3). The working section (6) has a plurality of webs (14) extending along the longitudinal axis (7) and arranged such that they are distributed about the longitudinal axis (7) in the peripheral direction (15). A dimension (27) of at least one of the webs (14) increases by at least one third in the peripheral direction (15), with increasing distance (26) from the longitudinal axis (7). The webs are significantly wider towards the outside or thinner towards the longitudinal axis.
