Abstract (en)

[origin: WO2017162560A1] The present invention relates to a container (10) and a lid (14), wherein the lid produces audible and tactile feedback when the container is closed with the lid. The invention further relates to a method for forming a lid for engagement with a container. A container with a lid includes at least one thread (20) on a neck of the container; at least one thread (30) on the lid; a bump (32) at the lower part of the lid; an end stop (22) on a lower end of the neck; and an engagement portion of the neck corresponding to an area where the bump of the lid will engage the neck when the lid is in a fully engaged position. The engagement portion (24) is arranged such that audible feedback and tactile feedback are produced when the lid moves into a fully engaged position.
