Abstract (en)
[origin: WO2017162966A1] The present invention relates to a mechanical heat exchanger (1) and to the method for manufacturing same. Said heat exchanger (1) includes: pipes (3) parallel to one another and capable of carrying a first heat-transfer fluid, and at least one stack of fins (4) including openings through which pipes (3) pass, characterised in that, when the exchanger is observed in a direction perpendicular to the pipes (3), the fins (4) form with one of the pipes (3), at the site of the openings, an angle other than 90°. The invention also relates to the method for manufacturing such a heat exchanger.
